

Azure Site Recovery (ASR) Lab SOP

Cross-Region Disaster Recovery Validation using Azure Site Recovery

Author: Shiva

Environment: Azure Free Subscription

Primary Region: West Europe

DR Region: West US

Lab Type: Hands-on DR Replication and Failover Validation

Document Type: Low-Level Implementation SOP / Demo Guide

1. Objective

This SOP describes the end-to-end implementation and validation of Azure Site Recovery (ASR) for Azure virtual machines using a hub-spoke network topology.

The lab demonstrates:

- Cross-region VM replication
- Recovery Services Vault configuration
- ASR replication policy creation
- Test failover execution
- DR VM validation
- Bastion connectivity testing
- NSG troubleshooting
- Cleanup activities
- Operational learnings and observations

This document can be used for:

- Team training
 - Internal KT sessions
 - DR concept demonstrations
 - Azure operational learning
 - CloudOps practice
-

2. Lab Architecture Overview

Primary Region (West Europe)

Virtual Networks

- hub-vnet

- spoke1-vnet
- spoke2-vnet
- shiva-vnet-WestEurope

Virtual Machines

- vm-web
- shiva-vm-web1

Supporting Services

- Azure Firewall (earlier lab/testing)
 - Azure Bastion
 - Azure Storage Account
 - Azure Private Endpoints
 - Azure Private DNS Zones
-

DR Region (West US)

DR Components

- spoke1-vnet-asr
 - vm-web-test (created during failover test)
 - ASR replicated disks
 - DR network interfaces
 - DR NSGs
 - Azure Bastion (temporary)
-

Recovery Services Components

Recovery Services Vault

- rsv-shiva-asr

ASR Cache Storage Account

- mulrgersvshivaasrcache

Automation Account

- rsv-shiva-cfi-asr-automationaccount
-

3. Source VM Details

Parameter	Value
VM Name	vm-web
Region	West Europe
Resource Group	rg-hubspoke-we

Parameter	Value
OS	Ubuntu 24.04
VM Size	Standard_B2ts_v2
VNet	spoke1-vnet
Subnet	subnet-web

4. Prerequisites

Before starting ASR configuration:

Required Resources

- Active Azure subscription
 - Source VM running successfully
 - Source VM agent healthy
 - Sufficient regional quota
 - Target DR region available
 - Existing source VNet/subnet
 - Owner/Contributor access
-

Recommended Preparation

- Enable boot diagnostics on VMs
 - Validate VM connectivity
 - Ensure VM health status is healthy
 - Verify VM uses supported OS/version
-

5. Recovery Services Vault Creation

Steps

1. Open Azure Portal
 2. Search:
 - Recovery Services Vault
 3. Click Create
-

Configuration Used

Setting	Value
Vault Name	rsv-shiva-asr

Setting	Value
Subscription	Shiva_Free_Subscription
Resource Group	shiva-AZ104-LAB
Region	North Europe
Storage Redundancy	Geo-redundant
Cross Region Restore	Disabled
Public Access	Enabled

Validation

Post deployment:

- Verify vault status = Succeeded
 - Open Site Recovery section successfully
-

6. Enable Site Recovery Replication

Navigation

Recovery Services Vault → Site Recovery → Enable Replication

Source Configuration

Parameter	Value
Source Region	West Europe
Deployment Model	Resource Manager
Resource Group	rg-hubspoke-we
DR Between Zones	No

VM Selection

Selected VM:

- vm-web
-

7. Target Configuration

DR Target Settings

Parameter	Value
Target Region	West US

Parameter	Value
Target Resource Group	rg-hubspoke-we-asr
Target Network	spoke1-vnet-asr
Replication Policy	24-hour-retention-policy

Automation Account

Azure automatically created:

- rsv-shiva-cfi-asr-automationaccount

Region observed:

- East US

Observation:

Azure may auto-create supporting resources in different regions depending on backend service availability.

8. Replication Policy

Policy Used

Default policy:

- 24-hour-retention-policy
-

Key Settings

Parameter	Value
Recovery Point Retention	24 Hours
Crash Consistent Frequency	Default
App Consistent Snapshots	Default

9. Replication Initialization

Actions Observed

Azure automatically created:

- ASR containers
- Replication mappings
- Cache storage account

- Recovery mappings
 - Target resources
-

Health Validation

Observed values:

Parameter	Status
Replication Health	Healthy
Agent Status	Healthy
RPO	~2 Minutes
Status	Protected

10. Test Failover Validation

Objective

Validate:

- DR VM creation
 - Disk replication
 - File consistency
 - Network configuration
 - Operational recovery capability
-

Pre-Test Validation

Created test files on source VM:

```
cd /home/shivaaz104
touch shiva1_test
touch shiva2_test
ls -ltr
```

Purpose:

To validate replicated filesystem consistency after failover.

11. Execute Test Failover

Navigation

Replicated Items → vm-web → Test Failover

Test Failover Configuration

Parameter	Value
Direction	West Europe → West US
Recovery Point	Latest
Test Network	spoke1-vnet-asr

Azure Operations Observed

Azure performed:

- Prerequisite validation
 - Test VM creation
 - Disk attachment
 - VM boot sequence
 - Network configuration
-

DR VM Created

Resource	Value
DR VM Name	vm-web-test
Region	West US
Resource Group	rg-hubspoke-we-asr
Network	spoke1-vnet-asr

12. Connectivity Challenges Observed

Initial Issue

Unable to connect to DR VM using:

- Bastion
 - SSH
 - Serial Console
-

Root Causes Identified

Issue 1

No NSG attached to DR VM NIC.

Issue 2

Inbound SSH (22) not allowed.

Issue 3

Boot diagnostics initially disabled.

Issue 4

Azure Bastion Developer SKU limitation:

- Supports single active connection
 - Limited compared to Standard SKU
-

13. Troubleshooting Performed

Step 1 - Enable Boot Diagnostics

Enabled boot diagnostics on DR VM.

Purpose:

- Enable serial console access
 - Validate boot health
 - OS troubleshooting
-

Step 2 - Create NSG

Created NSG:

- vm-web964-test-nsg
-

Step 3 - Allow SSH

Created inbound rule:

Parameter	Value
Protocol	TCP
Port	22
Source	Any / Admin IP
Action	Allow

Step 4 - Attach NSG

Attached NSG to:

- DR VM NIC
-

Step 5 - Bastion Validation

Connected successfully using Azure Bastion.

14. DR Validation Success

Validation Commands

Executed on DR VM:

```
hostname
uptime
pwd
ls -ltr
```

Validation Results

Observed replicated files:

- shiva1_test
- shiva2_test

Conclusion:

- File system replication successful
 - DR VM boot successful
 - Test failover validated successfully
-

15. Test Failover Cleanup

Navigation

Replicated Item → Cleanup Test Failover

Azure Cleanup Actions

Observed:

- Test VM deletion
- Temporary resource cleanup
- Test environment removal

Validation

Confirmed:

- vm-web-test removed
 - Temporary DR compute removed
 - Replication still active after cleanup
-

16. Disable Replication

Navigation

Replicated Item → Disable Replication

Actions

- Replication disabled
 - Replicated items removed from vault
-

Important Observation

Disabling replication does NOT automatically remove:

- Cache storage accounts
- Recovery Services Vault
- Supporting resources
- Automation accounts

Manual cleanup may be required.

17. Additional Related Resources Identified

Azure Backup Vault

Observed existing vault:

- vault-moabluxv

Purpose:

- Azure Files backup
 - shivasmbshare backup retention
-

Soft Delete Observation

Received alert:

- Delete Backup Data alert

Learning:

Azure Backup uses:

- Soft delete retention
 - Delayed permanent deletion
 - Protection against accidental deletion
-

18. Key Operational Learnings

ASR Concepts Learned

- Cross-region VM replication
 - RPO monitoring
 - DR networking
 - Recovery Services Vault operation
 - Replication policies
 - Test failover workflow
 - DR validation process
-

Cloud Operations Learnings

- Orphan resource cleanup
 - Public IP cleanup
 - NSG dependency validation
 - Bastion limitations
 - Boot diagnostics importance
 - Soft delete behavior
 - Cost hygiene practices
-

19. Resource Inventory Used During Lab

Networking

- hub-vnet
- spoke1-vnet
- spoke2-vnet
- spoke1-vnet-asr

- shiva-vnet-WestEurope
-

Virtual Machines

- vm-web
 - shiva-vm-web1
 - vm-web-test
-

Storage

- shivastorage104
 - mulrgersvshivaasrcache
-

Security

- vm-web-nsg
 - vm-web964-test-nsg
 - nsg-web-we
-

Recovery Services

- rsv-shiva-asr
 - vault-moabluxv
-

Connectivity

- spoke1-vnet-bastion
 - spoke1-vnet-asr-bastion
-

20. Recommended Enhancements for Future Labs

Suggested Next Steps

- Planned failover
- Re-protect workflow
- Failback testing
- Multi-VM consistency groups
- ASR recovery plans
- DR automation runbooks
- Azure Monitor integration
- Log Analytics integration
- Sentinel integration

- DR drill documentation
-

21. Important Notes

Azure Free Subscription Considerations

Observed limitations:

- Regional quota limitations
- Bastion Developer SKU restrictions
- Some services unavailable
- Limited vCPU availability

Despite limitations, full ASR validation was successfully completed.

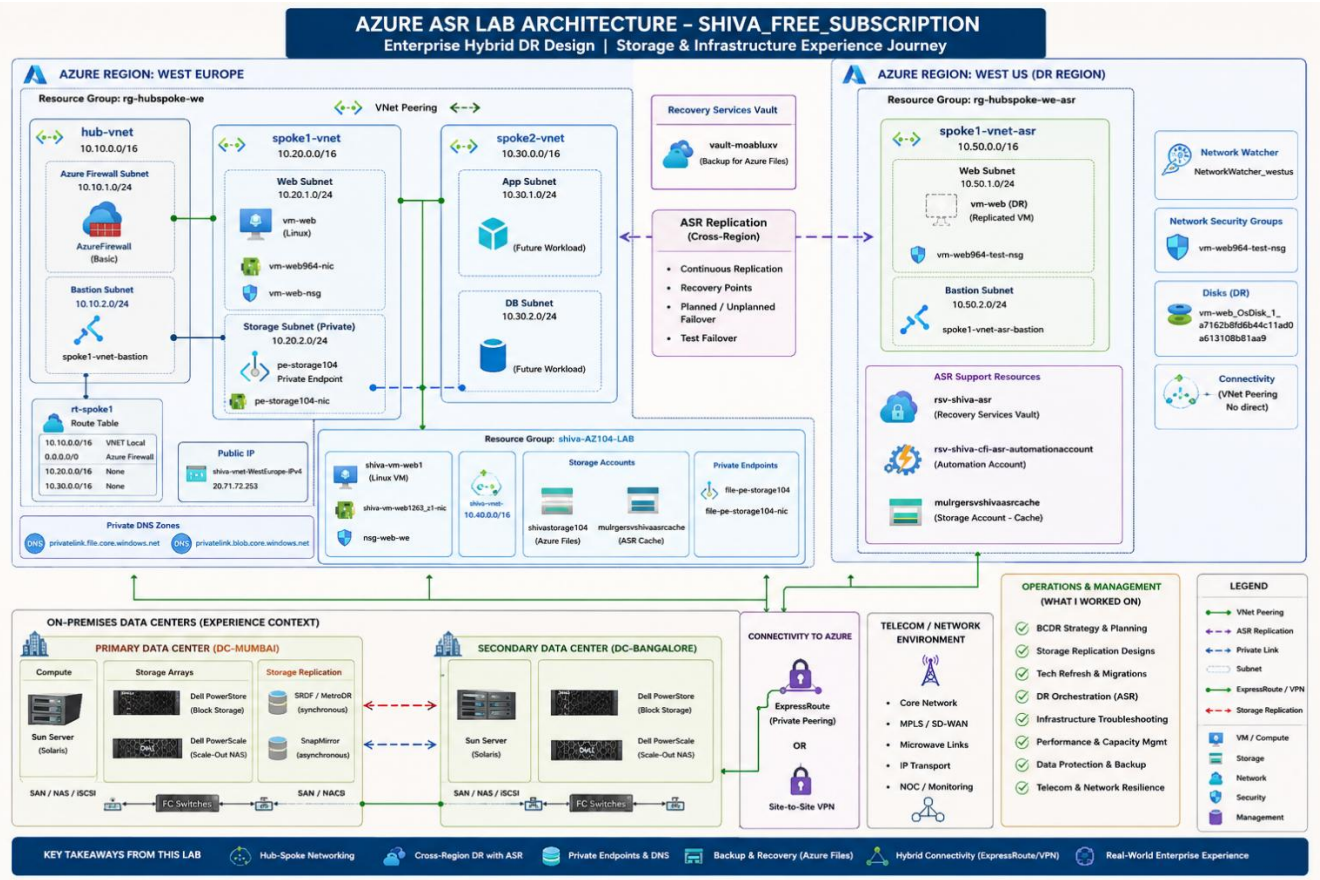

22. Final Outcome

Successfully Demonstrated

- ✓ Recovery Services Vault deployment
 - ✓ Azure Site Recovery replication
 - ✓ Cross-region DR architecture
 - ✓ DR VM creation
 - ✓ File-level replication validation
 - ✓ Bastion-based DR access
 - ✓ NSG troubleshooting
 - ✓ Test failover execution
 - ✓ Test failover cleanup
 - ✓ Replication disable workflow
 - ✓ Operational troubleshooting and validation
-

23. SOP with Screenshots

vm-web-test

Virtual machine

Help me copy this VM in any region | Manage this VM with Azure CLI

Your VM has a default outbound IP, which is insecure and will no longer be assigned by default for new subnets after March 2026. To secure your VM and subnets and ensure future compatibility, follow guidance to add an explicit method of outbound and set your subnets to private.

Help me copy this VM in any region

Network security gr... : -
Accelerated network... : Disabled
Effective security rules : 0

No port rules to display

Network security group is an essential component of Azure's network security architecture, providing inbound and outbound traffic filtering for network resources. Customers can connect to their virtual machines securely by adding the appropriate port rules, allowing granular control over inbound traffic and ensuring authorized access to specific ports and protocols.

Add network security group

Subnets

Create subnets to segment the virtual network address space into smaller ranges for use by your applications. When you deploy resources into a subnet, Azure assigns the resource an IP address from the subnet.

Name	IPv4	IPv6	Available IPs	Delegated to	Security group	Route table
subnet-web	10.11.1.0/24	-	250	-	-	-

Dest.

Troubleshooting

- NSG configuration
- Bastion connectivity
- Serial console
- Boot diagnostics

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes the Microsoft Azure logo, an 'Upgrade' button, a search bar, and a 'Copilot' button. The main content area is titled 'vm-web-test | Connect' and shows the 'Connect' page for a virtual machine named 'vm-web-test'.

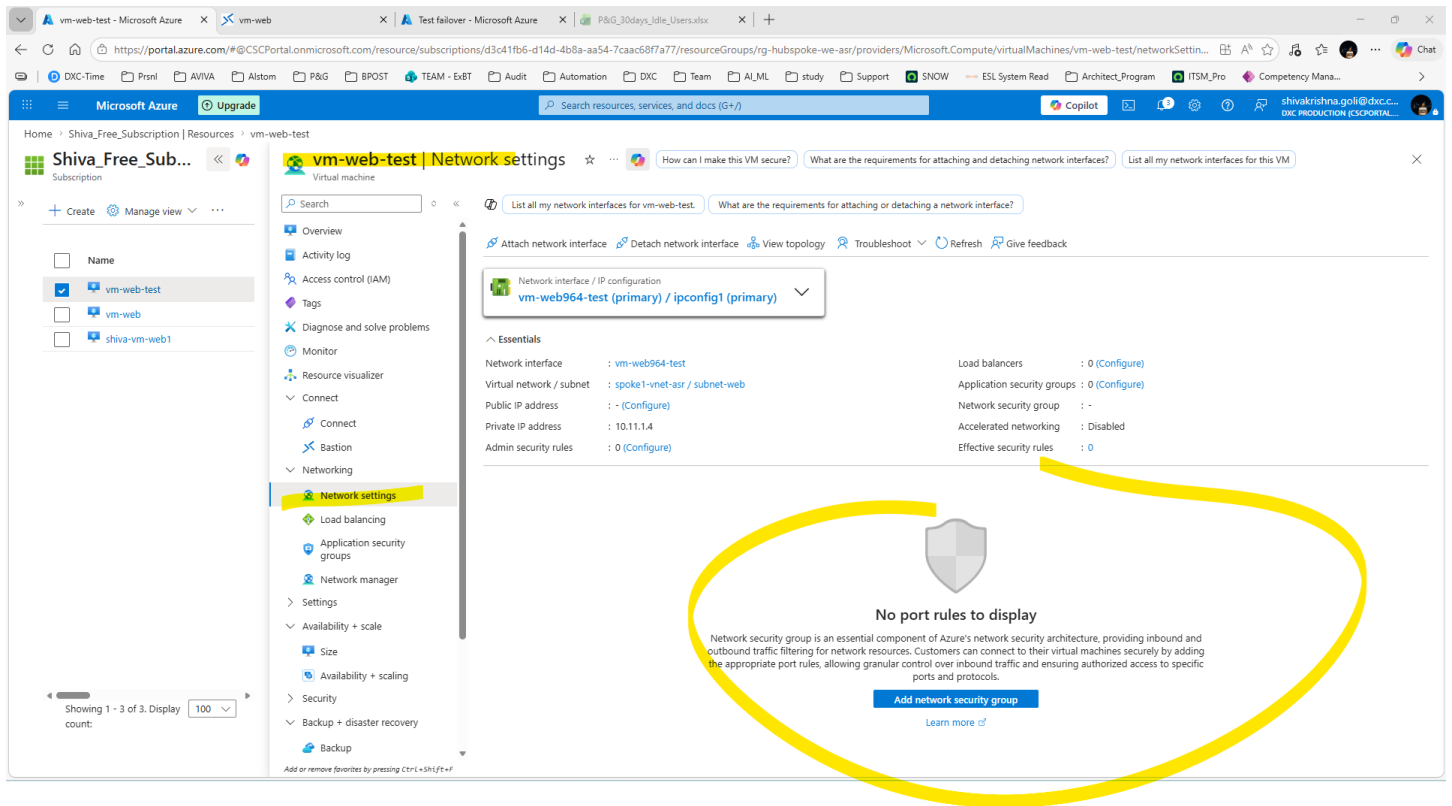

The left sidebar shows the 'Connect' page with a search bar and a list of resources. The 'Connect' page is divided into several sections:

- Source machine:** Source machine OS (Windows), Source IP address (Local IP | 49.43.230.188), and a link to 'Connecting over a VPN?'.
Destination VM: VM IP address (Private IP | 10.11.1.4), VM port (22).
- Connection prerequisites:** Line of sight to private IP address (Manually configure line of sight to private IP address [How to configure](#)), VM access (Port 22 is not accessible from source IP(s) [View blocking NSG rules](#)), and a 'Check access' button.
- SSH command:** Execute in your choice of local shell (ssh <vm-username>@10.11.1.4), Forgot password? [Reset password](#), and an 'Edit settings' button.

Below the connection prerequisites, there is a section titled 'More ways to connect (4)' with four options:

- SSH using Azure CLI:** Quickly connect in browser. Supports Microsoft Entra ID authentication. Private key not required. [Connect via Azure CLI](#)
- Bastion (Basic, Standard, or Premium):** Advanced capabilities including custom inbound port, RDP on desktop, and host scaling. [Learn more](#) [Upgrade](#)
- Serial console:** Troubleshooting network or operation. [Go to serial console](#)

There was no NSG to allow SSH on the DR VM

Created NSG and allowed port 22 and finally connected to the DR VM - test files I created on source VM are available DR failover test success. I can connect to Source VM also when the test failover is happend

Next is to Disable replication for the VM,

The screenshot shows the Microsoft Azure portal interface. On the left, the 'Resource Manager' sidebar is visible with the 'Replicated items' section highlighted. The main content area displays the 'Replicated items' page for 'rsv-shiva-asr'. A table lists the replicated items, with 'vm-web' highlighted. A context menu is open for 'vm-web', and the 'Disable Replication' option is selected and circled in green.

Name	Replication Health	Status	Active location	Failover Health
vm-web	Healthy	Protected	West Europe	Healthy

The screenshot shows the 'Disable Replication' form in the Microsoft Azure portal. The form includes a feedback section with checkboxes for reasons and a text area for comments.

Disable Replication

vm-web

This will remove the replicated item from Azure Site Recovery. Replication configuration on source will not be cleaned up. Site Recovery billing for the machine will stop. Click to learn more.

Please select the reason(s) for disabling protection for this virtual machine. Your feedback is important to improve our product to meet your requirements.

☐ I don't want to provide feedback.

☐ I faced issues with Azure Site Recovery.

☒ I am doing a proof of concept (POC) or trial with Azure Site Recovery.

Are you likely to use Azure Site Recovery in the future? *

Yes

Please share feedback on what went well while using Azure Site Recovery and what did not?

I used ASR to perform a test POC and it is successfully completed data validation was successful after test failover, only thing is I had to create a new nsg allowing ssh and attach to DR VM

☒ I completed migrating my application.

24. Conclusion

This lab successfully demonstrated enterprise-style disaster recovery implementation using Azure Site Recovery.

The exercise provided practical experience in:

- DR architecture
- Replication workflows
- Failover testing
- Cloud networking
- Operational troubleshooting
- Recovery validation
- Cleanup and governance

The lab environment closely simulated real-world enterprise DR operational activities and provided hands-on experience with Azure-native disaster recovery capabilities.
